

FOR A  
BRIGHT  
TOMORROW.

MOBILE ADSORBER  
**FILTER**  
**SERVICE**  
AND ACTIVATED  
CARBON SERVICE

# Rental and sale OF ADSORBERS

...mobile or stationary, for a wide range of applications and flow rates.

We offer our adsorbers in all sizes as a mobile solution. Optionally we can provide suitable equipment for the replacement of spent activated carbon in stationary adsorbers on site.

We are glad to support you with individually tailored concepts for logistics and carbon replacement, which can reduce your personnel and operating costs.

All standard adsorbers from our rental pool can be delivered within a few days. On request, we also offer adsorbers for sale according to customer specifications.

## ADSORBERS FOR GAS / AIR PURIFICATION

- » For reliable compliance with limit values in production and manufacturing processes, e.g. in the chemical industry
- » To reduce emissions or odours in exhaust air from waste management and recycling applications
- » As a short-term backup for other processing technologies (e.g. post-combustion) in the case of failure or revision
- » In remediation projects of soils and groundwater or leachate to remove pollutants that have passed into the gas phase
- » For the treatment of sewage gas and biogas

# Individual SOLUTIONS

Our portfolio contains solutions for a wide range of applications.

## ADSORBERS FOR LIQUID / WATER PURIFICATION

- » For the treatment of wastewater from production processes to comply with increasingly stringent discharge requirements
- » As a short-term solution for emergencies or extinguishing operations
- » For the treatment of drinking water and in the beverage industry, where demands on the quality of the adsorbers and activated carbon are particularly high
- » For the treatment of landfill leachate, temporary applications on construction sites, e.g. for groundwater retention, or as part of a groundwater treatment plant
- » In the chemical or food industry for liquid products to achieve your high quality specifications, e.g. for decolourizing solutions or neutralizing odours and flavours

For the solution of many problems and tasks in gas and liquid purification, we have a high level of expertise and many years of experience in both application planning and practical implementation. We can therefore support you with our expertise in every phase of your project.

You have a problem that needs to be solved at short notice: With our constantly growing pool of adsorbers and components, we can often implement our solutions very quickly.

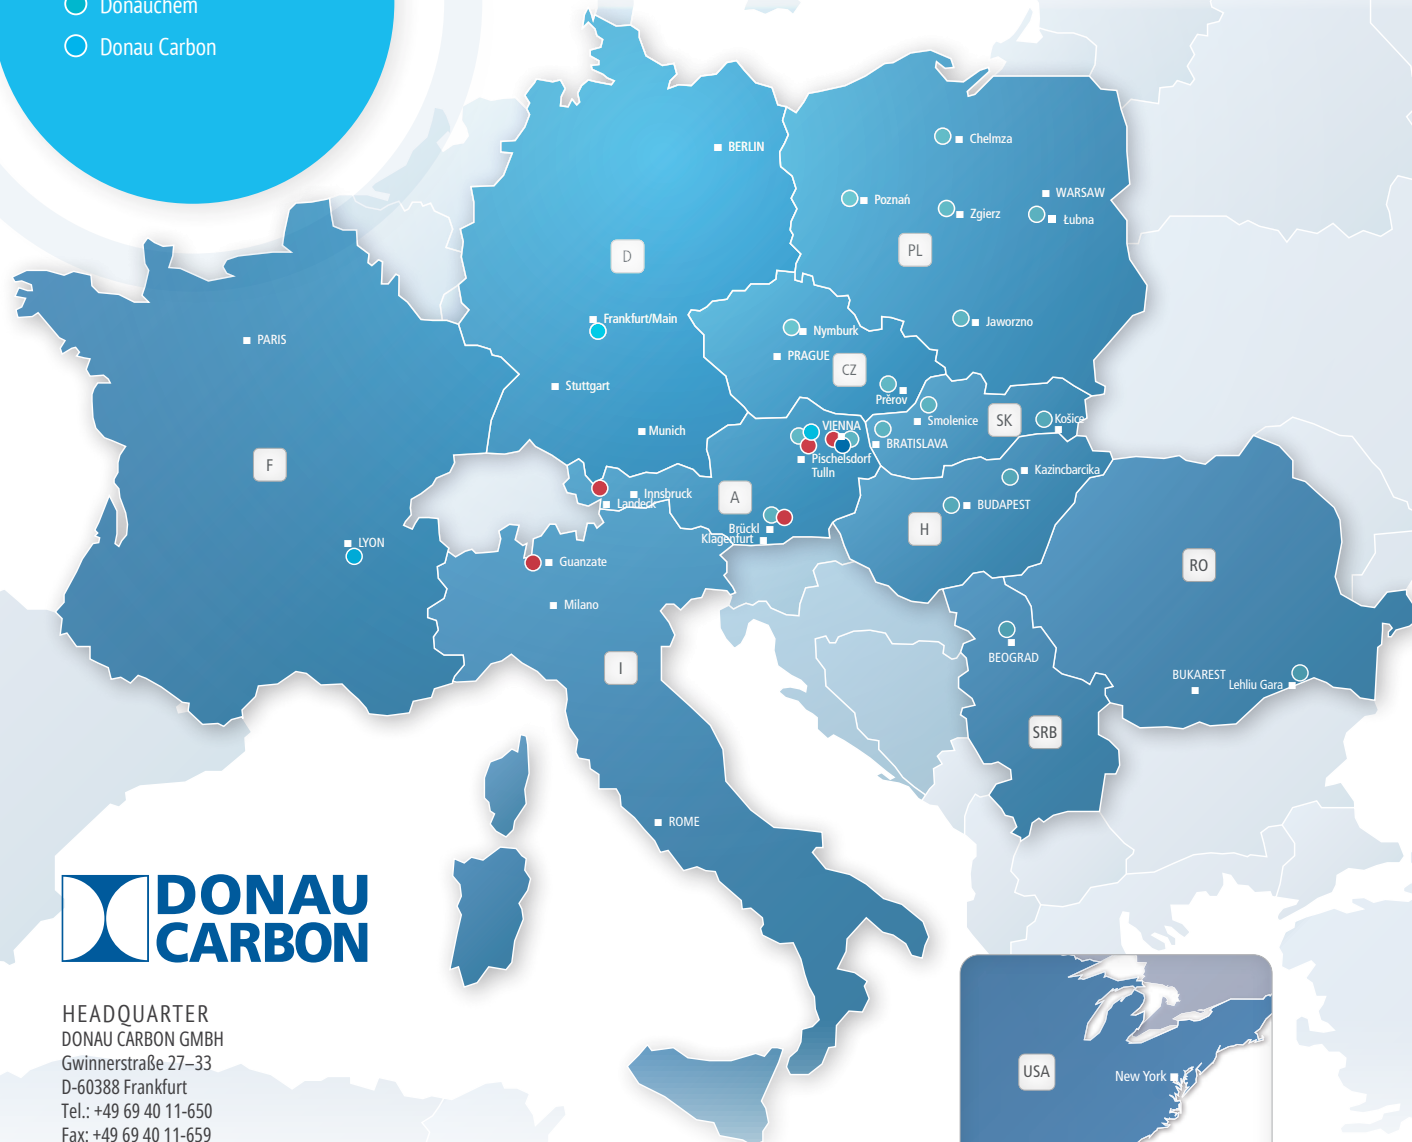

Our portfolio includes:

- » Rental and sale of mobile adsorbers
- » Mobile or stationary activated carbon replacement
- » Advice in application and process engineering
- » Process optimization
- » Creation of operating and service concepts
- » Laboratory services
